

“Fat Trapper” container available

El Dorado Water Utilities has a limited number of “Fat Trapper” kitchen grease/fat containers available.

Using the “Fat Trapper” is a safe way to contain and dispose of cooking fats and grease. Putting fats and grease down the drain, causes sewer line stop-ups and clogs our treatment process requiring additional maintenance and expense.

You can help the El Dorado Water Utility reduce clogged sewer lines by using the Fat Trapper and emptying all of your cooking grease and fats into the bag. You can place products up to 150 degrees into the bag. When the bag is filled, seal it and place the bag in the trash.

These containers are available for a limited time, free of charge at the Utility office at 500 North Washington. Each container has one sealable bag. More bags are available upon request.
